

## SFA Group strengthens its SFA enviro division with the acquisition of Envirosep

Docs. SFA

An installation by Envirosep featuring 2 STRATOSEP screens, 1 ENVIROSPIR screw conveyor and 1 SPIRAPRESS screw washer-compactor.

This acquisition is part of the development strategy of **SFA enviro**, the Group's division dedicated to equipment for municipal and industrial wastewater treatment.

SFA enviro builds on the strong legacy of **Europelec**, the pioneer within SFA Group in the field of water treatment. This foundation was further strengthened through the acquisitions of **Aquasystems International** in Belgium and **Aquaturbo Systems** in the United States, leading to the official launch of the SFA enviro division at the IFAT trade show in 2022. Since then, SFA enviro has continued to expand its international footprint.

**Envirosep** and SFA enviro have been working closely together since 2022, when SFA enviro began marketing the Envirosep range internationally.

This cooperation has led to numerous commercial successes in Europe, the Middle East, and Latin America. Three years later, this strategic partnership reaches a new milestone with the integration of Envirosep into SFA enviro.

Thanks to this acquisition, **SFA enviro strengthens its offering in primary treatment equipment and sludge management**, complementing its established expertise in aeration technologies. The Group thus expands its ability to provide global solutions to wastewater treatment plant operators, local authorities, and industrial clients worldwide.

SFA Group continues to strengthen its division dedicated to water treatment with the acquisition of the French company Envirosep, a specialist in equipment for municipal water treatment.

Founded in 2014 by **Nicolas Brincourt**, Envirosep designs and manufactures in France a range of equipment dedicated to wastewater pre-treatment and sludge management. The company has quickly established itself as a recognised player thanks to its expertise in screw and bar screens, conveying-compacting screws, sand classifiers, paddle mixers for liming, as well as sludge extractors.

For **Aurélien Goyeau**, Managing Director of SFA enviro: "The integration of Envirosep into SFA enviro represents a natural evolution of our collaboration initiated three years ago. The solutions developed by Envirosep perfectly complement our technological portfolio and enhance our ability to support wastewater treatment plant operators with a comprehensive offering covering all stages of water treatment."

For **Stéphane Harel** – Deputy CEO of SFA Group: "The acquisition of Envirosep fully aligns with SFA Group's development strategy in the field of water treatment. It illustrates our ambition to build an international player capable of delivering comprehensive and high-performance technological solutions to address global water management challenges."

With this acquisition, **SFA Group confirms its ambition to continue developing SFA enviro**, relying on recognised technologies, strengthened local presence, and an active strategy of partnerships and acquisitions.
